

## IT Update Sept 2024

- Smart TV's have been installed in A4, A10, A12 & Loft. Whilst we still have a number of rooms (11) with projectors in them, these are too new to consider replacing at this time.
- Loft been converted to a computer room with 30 desktop computers and a mono printer.
- New cashless catering software was installed over the summer holidays.
- We were donated 15 refurbished laptops over the summer, which we are using instead of purchasing replacement laptops this academic year.
- We have now migrated our home folders across to OneDrive, with the shared drives currently being evaluated. This continues our work to take advantage of cloud services, and to reduce the amount of data that we are keeping within school. This also helps with cybersecurity, and we hope to reduce our onsite server environment soon, which will also save energy.
